#### PHYS 119A Midterm Examination

### Wednesday 28 October 2009

Question 1	/ 10
Question 2	/ 15
Question 3	/ 10
BONUS	/2
Total	/ 35

# **Question 1: Short Answers (10 points)**

a. Consider the following change in state: 1 mole of a real gas undergoes a reversible change in state in a Carnot cycle. Will  $\Delta U$  be greater, smaller or equal than the  $\Delta U$  for an ideal gas undergoing the same cycle. EXPLAIN (or you will not get full credit).

b. What is the constant volume heat capacity  $(C_v)$  of 1 mole of an ideal diatomic gas at room temperature? Explain. What is the heat capacity at constant pressure  $(C_p)$  for this same system? Explain.

Note: at this temperature, the vibrational modes are not excited.

c. Consider a real gas, with attractive intermolecular interactions that undergoes a **free** expansion (the external pressure is zero) in a thermally insulated container to twice its initial volume. In this process, will  $\Delta U$  be positive, negative or zero? Explain.

$$W=0$$
 free expansion

 $q=0$  adiabatic

 $DU=0$ 
 $DU=0$ 

# **Question 2: 15 points**

Consider a real gas with equation of state:

$$P = \frac{RT}{\overline{V} - b} - \frac{a}{T^{1/2}} \frac{1}{\overline{V}(\overline{V} + b)}$$

and 
$$\overline{V} = \frac{V}{n}$$

Consider the reversible isothermal expansion at a temperature T of 1 mol of this gas from an initial state with volume  $V_1$  to a final state with volume  $V_2$ . Find an expression for w and  $\Delta U$  for this process. Simplify your expressions (i.e. evaluate all partial derivatives and integrals). Show all your work! Write your final answer in the table below:

	WORK	ΔU
Expression	-RTh(\(\vec{V_3}-b\)\\ +\frac{9}{674}\langle\left(\(\vec{V_3}(\vec{V_3}+b)\)\\ \vec{V_3}(\vec{V_3}+b)\right)	3 4 / (V+6)

The following integral may be useful: 
$$\overline{W} = -\int_{V_{i}}^{V_{i}} \frac{dV}{(V-b)} = \ln \frac{(V_{2}-b)}{(V_{i}-b)} = -RT \int_{V_{i}}^{V_{i}} \frac{dV}{(\overline{V}-b)} + \frac{q}{T^{1/2}} \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}+b)} = -RT \int_{V_{i}}^{V_{i}} \frac{dV}{(\overline{V}-b)} + \frac{q}{T^{1/2}} \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}+b)} = -RT \int_{V_{i}}^{V_{i}} \frac{dV}{(\overline{V}-b)} + \frac{q}{bT^{1/2}} \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}+b)} = -RT \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}-b)} + \frac{q}{bT^{1/2}} \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}-b)} + \frac{q}{bT^{1/2}} \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}-b)} = -RT \int_{V_{i}}^{V_{i}} \frac{1}{\overline{V}(\overline{V}-b)} + \frac{q}{bT^{1/2}} \int_{V_{i}}^{V_$$

**EXTRA PAGE** 

$$T \frac{\partial \Gamma}{\partial \tau} |_{\overline{v}} = \frac{RT}{\overline{v} - b} + \frac{\alpha}{2} \frac{1}{V(\overline{v} + b)}$$

$$= P + \frac{3}{2} \frac{q}{\Gamma / 3} \frac{1}{V(\overline{v} + b)}$$

$$= D + \frac{3}{2} \frac{q}{\Gamma / 3} \frac{1}{V(\overline{v} + b)}$$

$$= \frac{3}{2} \frac{q}{\Gamma / 3} \frac{1}{V(\overline{v} + b)}$$

$$= \frac{3}{2} \frac{q}{\Gamma / 3} \frac{1}{V(\overline{v} + b)}$$

$$= \frac{3}{2} \frac{q}{\Gamma / 3} \frac{1}{V(\overline{v} + b)}$$

# **Question 3: DERIVATIONS (10 points)**

Consider a real gas with equation of state:

$$\overline{V} = \left(\frac{RT}{P}\right) + B(T)$$

where B(T) means that B is a function of T.

- a) Obtain an expression for  $\left(\frac{\partial H}{\partial P}\right)_{\tau} = V T \left(\frac{\partial V}{\partial T}\right)_{\rho}$  in terms of T, B(T) and  $\frac{dB(T)}{dT}$  for one mole of gas.  $\frac{\partial V}{\partial T}|_{P} = \frac{R}{P} + \frac{dB}{dT}$   $\frac{\partial F}{\partial P|_{T}} = V T \frac{\partial V}{\partial T}|_{P} = V \frac{RT}{P} T \frac{dB(T)}{dT}$   $\frac{\partial F}{\partial P|_{T}} = B(T) T \frac{dB(T)}{dT}$
- b) Use the properties of mixed derivatives of state functions and the result of part a) to obtain an expression for  $\left(\frac{\partial C_p}{\partial P}\right)_T$  for (one mole) of this gas.

Your final expression should contain some (not necessarily all!) of the following terms:  $T, B(T), \frac{dB(T)}{dT}$  and  $\frac{d^2B(T)}{dT^2}$ .

$$\varphi = \frac{\partial H}{\partial r} |_{p} \qquad \frac{\partial \varphi}{\partial p} |_{T} = \frac{\partial H}{\partial p \partial T} = \frac{\partial}{\partial r} \left( \frac{\partial H}{\partial p} |_{r} \right)_{p}$$

$$\left|\frac{\partial C_{0}}{\partial P}\right|_{T} = -T \frac{d\dot{B}}{dI^{2}}$$

$$= \frac{\partial}{\partial I} \left[B(T) - T \frac{dB(T)}{dI}\right]$$

$$= \frac{dB(t)}{dt} - \frac{dB(t)}{dI} - T \frac{d\dot{B}}{dI^{2}}$$

# **BONUS QUESTION: 2 POINTS**

Show that 
$$\left(\frac{\partial H}{\partial P}\right)_T = V - T \left(\frac{\partial V}{\partial T}\right)_P$$

Hint: Use the fact that H=U+PV and that  $\left(\frac{\partial U}{\partial V}\right)_T = T\left(\frac{\partial P}{\partial T}\right)_V - P$ 

$$\frac{\partial H}{\partial P_{1}} = \frac{\partial H}{\partial V_{1}} \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + P + V \frac{\partial P}{\partial V_{1}} \right) \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + P + V \frac{\partial P}{\partial V_{1}} \right) \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + P + V \frac{\partial P}{\partial V_{1}} \right) \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \frac{\partial V}{\partial P_{1}} \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial V_{1}} + V \frac{\partial V}{\partial V_{1}} \right) \left( \frac{\partial V}{\partial$$
